The invention relates to a novel monoclonal antibody specific to adenylate kinase isozyme 3, comprising 4 or more of 6 complementarity determining regions (CDRs) of a sequence having 6-18 amino acids. The invention further relates to: a composition comprising the monoclonal antibody for the diagnosis of heart disease, and a method of detecting a heart disease marker AK3; a kit comprising the monoclonal antibody for the diagnosis of heart disease; and a method of detecting a heart disease marker AK3. The monoclonal antibody is useful for preparing a composition for detecting a heart disease marker AK3. The monoclonal antibody reduces false positive results of the conventional biochemical markers. This sequence represents a human antibody variable light chain CDR peptide region of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New monoclonal antibody specific to human mitochondrial adenylate kinase isozyme 3, useful for preparing a composition for detecting a heart disease marker AK3.
                                                                                                                            New monoclonal antibody specific to human mitochondrial adenylate kinase isozyme 3, useful for preparing a composition for detecting a heart disease marker AK3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       monoclonal antibody, adenylate kinase isozyme 3; complementarity determining region; CDR; heart disease; marker AK3; biochemical; human; variable; light chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human SJB3-31 antibody variable light chain CDR1 peptide region.

               adenylate kinase iscayme 3, comprising 4 or more of 6 complementarity determining regions (CDRs) of a sequence having 6-18 amino acids. The invertion further relates to: a composition comprising the monoclonal antibody for detecting a heart disease marker AR3; a kit comprising the monoclonal antibody for the diagnosis of heart disease; and a method of detecting a heart disease marker AR3. The monoclonal antibody is useful for preparing a composition for detecting a heart disease marker AR3. The monoclonal antibody reduces false positive results of the conventional biochemical markers. This sequence represents a human antibody variable light chain CDR peptide region of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antibodies that bind specifically to the Core-1 antigen. The recognition molecules are used to make constructs containing the framework regions hat separate, include and/or flank the specified sequences, especially where the framework regions are from the immunoglobulin (1g) superfamily, protease inhibitors, lectins, helix-bundle proteins and/or lipocalins. Most especially the framework regions are from antibodies, particularly the variable heavy chain (WH) and the variable light chain (WL) of human and/or murine origin. The constructs may also include a His or myc tag, a lysine-rich region and/or a multimerisation domain, most particularly it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New recognition molecules, e.g. antibodies (and nucleic acids) that bind specifically to Core-1 antigens, useful for diagnosis, treatment and prevention of tumors and metastases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antibody; Core-1 antigen; framework region; immunoglobulin superfamily; procease inhibitor; lectin; helix-bundle protein; lipocalin; variable heavy chain; VI; variable light chain; VI; vaccine; diagnosis; alleviation; treatment; tumour; breast; colon; stomach; pancreas; large/small intestine; ovary; cervix; lung; prostate; kidney; liver;

Monoclonal anti-granulocyte antibody that binds NCA90 and NCA95 antigens, useful for treating malignancy, inflammation, atherosclerosis, infarction, or other granulocyte related disorders.

Claim 4; Page 105; 134pp; English

The invention relates to a monoclonal antibody (Mab) (I) or its fragment that binds NCA90 or NCA95, where when the Mab or its fragment binds NCA90 the Mab or its fragment is chimeric, partially humanized or fully humanized and where when the Mab or its fragment binds NCA95 the Mab or its fragment is either fully humanized or chimeric, partially humanized or fully humanized BW 250/183. (I) is useful for treating, detecting or imaging sizes, palvic inflammation resulting from appendicitis, inflammatory bowel disease, pelvic inflammatory disease, fever and cystic fibrosis and treating granulocyte related disorders, atherosclerosis and infarction. (I) is useful for detecting or treating cancer or ischemic lesion. This sequence corresponds to the complementarity determining region I (CDRI) of the light chain of the antibody of the invention.

Preparing immunoglobulin binding protein array in plant cells by transforming the cells with different polynuclectides encoding binding protein polypeptides specific to ligand, selecting plant cells for preparing array.

Disclosure, Page 14; 129pp; English.

The invention relates to transforming a population of cells (e.g. plant cells), comprising using a library of two different polymuclectides encoding different immunoglobulin binding protein (19BP) polypeptides that specifically bind to a ligand or form one or more disulphide bonds with polypeptides in transfected cells, to generate an 19BP that binds to a ligand, and transformed plant cells are selected, and preparing an 19BP array in plant cells. At least one peptide sequence has at least 75\$ sequence identity to a framework region (FR) of a native 19M, 19G, 19A, 19D, 19E, 19Y, kappa or lambda immunoglobulin molecule. The method is useful for preparing an immunoglobulin binding protein array, preferably AAU70349

A;Title: A new alpha-conotoxin which targets alpha3beta2 nicotinic acetylcholine receptor
A;Reference number: A59046; MUID:96205934; PMID:8631783
A;Accession: A59046
A;Status: preliminary
A;Molecule type: protein
A;Residues: 1-16 <CAR>
A;Residues: UNIPROT:P56636; UNIPARC:UPI00001287CA
C;Superfamily: alpha-conotoxin
C;Keywords: acetylcholine receptor inhibitor; amidated carboxyl end; postsynaptic neurot
F;1-16/Product: alpha-conotoxin MII #status experimental <AMT>
F;2-8,3-16/Disulfide bonds: #status experimental
F;16/Modified site: amidated carboxyl end (Cys) #status experimental

"Bacillus subtilis ORF yyb0 encodes a manganese-dependent inorganic pyrophosphatease with distinctive properties: the first of a new class of soluble pyrophosphatase?";
Microbiology 144:2563-2571(1998).
-!- CATALYTIC ACTIVITY: Diphosphate + H(2)O = 2 phosphate.
-!- COPACTOR: Binds 2 manganese ions per subunit (By similarity).
-!- SINCELLULAR LOCATION: Oytoplasmic (By similarity).
-!- SINLARITY: Belongs to the PPase class C family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.

Claim 1; SEQ ID NO 4; 164pp; French.

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (1) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with

```
ö
hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents an CDR sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Insulin-like growth factor 1 receptor; antibody; tumor; cytostatic; neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor;

```
specifically inhibiting tyrosine kinase activity of the receptor, comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined is amino acids (ADZ67006 and ADZ67014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal activation of the IGR-IR and/or EGRR, and/or connected with a hyperactivation of the transduction pathway of the signal mediated by the interaction of the transduction pathway of the signal mediated by the interaction of the medicament does not induce or only slightly induces secondary effects connected with inhibition of the insulin receptor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells into cells with tumoral clean and/or EGP-dependent, especially IGP1 and/or IGP2.

Conaracter, preferably IGP-dependent, especially IGP1 and/or IGP2.

Consetul for preparation of twore cells, preferably IGP-dependent, and/or the proliferation of two medicament intended to inhibit the growth and/or EGP-dependent and/or EGP-dependen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                       The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-1R) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-1R. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-1R and/or procession and/or abnormal activity of IGF-1R and/or procession and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of normal cells to tumor cells, inhibit growth and/or
                                                                                                                                                                                                                                                     proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cytostatic; antipsoriatic; antibody; IGF-IR; tyrosine kinase activity; insulin-like growth factor-1 receptor; IGFR; signal transduction pathway; or epidermal growth factor receptor; RGFR; signal transduction pathway; ligand; tumor; cancer; osteosarcoma; complementarity determining region;

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or creat diseases associated with overexpression and/or abnormal activity of IGF-IR. Ab and its fragments are used to prevent or IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with the presentivity of signal transduction pathways mediated by interaction of these receptors with thair ligands. Especially they inhibit trowth and/or transformation of numor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also seteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (1) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          insulin-like growth factor-i receptor; IGF-1R; tyrosine kinase activity; or epidermal growth factor receptor; EGFR; signal transduction pathway; ligand; tumor; cancer; osteosarcoma; complementarity determining region;

kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit growth and/or proliferation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gymecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriaais; dermatological disease; immune disorder; immunoglobulin; light chain variable region.

The inversion relates to a novel isolated anti-insulinity being capable of binding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of capable of binding tyroaline kinase activity of the receptor, comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino acids (ADZ67006 and ADZ67014). An antibody of the prevention of restment of an illness connected with an overexpression and/or an abnormal cof an illness connected with an overexpression and/or an abnormal cof an illness connected with an overexpression and/or or EGF. IR and/or EGFR, and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly induced a different connected with inhibition of the insulin creceptor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells into cells with tumoral capendant and/or EGF-dependent and/or EGF and/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; colon tumor; light chain variable region.
relates to a novel isolated anti-insulin-like growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGF IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (1), which is optionally labeled. The present sequence is used in the exemplification of the invention.

```
The invertion relates to a novel isolated anti-insulin-inseq growth ractor capable of binding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of specifically inhibiting tyrosine kinase activity of the receptor, comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino acids (ADZ67006 and ADZ670014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal cof an illness connected with an overexpression and/or an abnormal cof interactivation of the Iransduction pathway of the signal mediated by the interaction of the Iransduction pathway of the signal mediated by the interaction of IGFI or IGF2-NK and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly induced a medicament does not induce or only slightly creceptor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells into cells with tumoral construction of tumor calls, preferably IGF-dependent, especially IGF-dependent and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent cells. (I) is useful in the preparation of a medicament intended for prevention or for the treatment of cancer, of the cancer, endometrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for the special cancer or colon cancer. (I) is useful in the preparation of a medicament intended for the special cancer or colon cancer. (I) is useful in the preparation of a medicament intended for the special cancer or colon cancer. (I) is useful in the composite cancer, endometrial cancer or colon cancer. (I) is useful in vitro diagnosis of a biologically active compound to cancer is characterial to inversepressing the IGF-IR and/or EGF entore.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (1), which is optionally labeled. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    invention relates to a novel isolated anti-insulin-like growth factor
                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor,
                                                                                                                                                                                                                                                                                                     Beck A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                        Haeuw J,

1 receptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of apable of binding to human IGF-IR and, if necessary, capable of positional fragment, being capable of binding to human IGF-IR and, if necessary, capable of expecifically inhibiting tyroalme kinase activity of the receptor, comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino caps (ADZ67006 and ADZ67014). An antibody of the invention 1s useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal of interaction of the IGF-IR and/or EGFR, and/or connected with a chiperaction of IGF1 or IGP2 with IGF-IR and/or of EGF with EGFR, where the administration of the medicament does not induce or only alightly induces secondary effects connected with inhibition of the insulin receptor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells into cells with tumoral The invention relates to a novel isolated anti-insulin-like growth factor Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor,

```
character, preferably IGF-dependent, especially IGF1 and/or IGF2-
dependent and/or EGF-dependent and/or HER2/neu-dependent cells. (I) is
useful for preparation of a medicament intended to inhibit the growth
and/or the proliferation of tumor cells, preferably IGF-dependent,
especially IGF1-and/or IGF2-dependent and/or EGF-dependent and/or
HER2/neu-dependent cells. (I) is useful in the preparation of a
medicament intended for prevention or for the treatment of cancer, where
the cancer is chosen from prostate cancer, osteosarcoma, lung cancer,
breast cancer, endometrial cancer or colon cancer. (I) is useful in the
preparation of a medicament intended for the prevention or for the
treatment of psoriasis. (I) is useful in preparation of a medicament
intended for the specific targeting of a biologically active compound to
calls expressing or vowerexpressing the IGF-IR and/or EGFR receptor. (I)
is useful for in vitro diagnosis of illnesses induced by an
overexpression or an underexpression of the IGF-IR and/or EGFR receptor
ER and/or EGFR receptor is suspected, which involves contacting the
biological sample with (I), which is optionally labeled. The present
expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-1R) and optionally: (i) inhibit natural binding of insulin-like growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              insulin-like growth factor-1 receptor; IGF-1R; tyrosine kinase activity; or epidermal growth factor receptor; EGFR; signal transduction pathway; ligand; tumor; cancer; osteosarcoma; complementarity determining region;

factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of the second and activity of the second and activity of the second activity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the
                                                                                                                                                                                                                                                                                                                                                                                                   prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-1R and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cytostatic; antipsoriatic; antibody; insulin-like growth factor-1 receptor; IGF-1R; tyrosine kinase activity; or epidermal growth factor receptor; EGFR; signal transduction pathway; ligand; tumor; cancer; osteosarcoma; complementarity determining region;

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (Ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or for epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of typeractivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Insulin-like growth factor 1 receptor; antibody; tumor; cytostatic; neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder; light chain variable region.

```
The invention relates to a novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of specifically inhibiting tyrosine kinase activity of the receptor, capable of specifically inhibiting tyrosine kinase activity of the receptor, determining a light or heavy chain having a least one complementary determining region (CDR) consisting of one of two fully defined 16 amino acids (ADZ67004 and ADZ67014). An antibody of the invention is useful in a lilness connected with an overexpression and/or an abnormal activation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal appreasation of the transduction pathway of the signal mediated by the interaction of IdF1 and/or EGFR, and/or CDFF with EGFR, where interaction of the remaductan pathway of the signal mediated by the interaction of IdF2 with IGF-IR and/or EGF with EGFR, where condary effects connected with inhibition of the insulint condances secondary effects connected with inhibition of the insulint condances secondary offects connected with inhibition of the insulint condances. The antibody is useful for preparation of a medicament and/or HER2/neu-dependent and/or EGF-dependent, especially IGF-dependent to for preparation of the medicament intended for prevention of tunder calls, into calls with the andorer, where the cancer is chosen from prostate cancer. Osteosarcoma, lung cancer, breast cancer, endometrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for the prevention of a medicament intended for the prevention or endometrial cancer or colon cancer. (I) is useful for in vitro diagnosis the IGF-IR and/or EGFR receptor. (I) is useful for in vitro diagnosis of illnesses induced by an endocament intended for the specific targeting to a biological sample in which the abnormal prevention. (I) is useful in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Beck A;

determining region (CDR) consisting of one of two fully defined 16 amino acids (ADZ67006 and ADZ67014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal activation of the IGF-IR and/or EGFR, and/or connected with an illness connected with a coverexpression and/or an abnormal consistence in the IGF-IR and/or EGFR, and/or of EGF with EGFR, where interaction of IGF or IGF-IR and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly induces secondary effects connected with inhibition of the insulin the receptor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells into cells with tumoral character, preferably IGF-dependent, and/or HERZ/neu-dependent and/or EGF-dependent cells. (I) is useful in the preparation of a medicament intended for preparation of a medicament intended for the preparation of a medicament of proparation of a medicament intended for the specific targeting of a biologically active compound to cells expressing or overexpressing the IGF-IR and/or EGFR receptor (I) is useful in preparation of a medicament intended for the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the receptor is suspected, which involves contacting the receptor is suspected which involves contacting the present of sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel genes derived from Ciona intestinalis (sea squirt), expressed in nervous system in the tailbud embryo or larva, useful for studying the development of nervous system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  gene cluster; nervous system; sea-squirt tailbud; embryo; larva;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .

This invention relates to a novel gene cluster, where the encoded proteins are expressed in the nervous system of sea-squirt tailbud embryo or larva. The invention is useful for studying the development of the nervous system of the sea-squirt and for research purposes. The genes may be used for determining the disease-development mechanisms in the nervous system. In addition, novel gene clusters expressed in nervous system of sea-squirt tailbud embryo or larva allows development of diagnostics and therapeutics related to nervous system diseases. The present sequence is that of a protein encoded by a C intestinalis gene of the invention.
                         Claim 4; SEQ ID NO 48; 897pp; Japanese.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

microcystin synthetase B [imported] - Nostoc sp. (strain PCC 7120)
C;Species: Nostoc sp. PCC 7120
A;Note: Nostoc sp. strain PCC 7120
A;Note: Nostoc sp. strain PCC 7120 is a synonym of Anabaena sp. strain PCC 7120
C;Date: 14-Dec-2001 #sequence_revision 14-Dec-2001 #text_change 09-Jul-2004
C;Accession: AD2136

"Nucleotide sequence of a cDNA encoding the glucose-6-phosphate
dehydrogenase from Arabidopsis thaliana.";

"Nucleotide sequence of a cDNA encoding the glucose-6-phosphate
dehydrogenase from Arabidopsis thaliana.";

"I (er) Plant Gene Register PGR95-021.

-!- FUNCTION: Catalyzes the rate-limiting step of the oxidative
pentose-phosphate pathway, which represents a route for the
dissimilation of taxbohydrates besides glycolysis. The main
function of this enzyme is to provide reducing power (NADPH) and
pentose phosphates for fatty acid and nucleic acid synthesis which
are involved in membrane synthesis and cell division.

-!- CATALYTIC ACTIVITY: D-glucose 6-phosphate + NADP(+) = D-glucono-
1.5-lactone 6-phosphate + NADPH.

-!- CATALYTIC ACTIVITY: Regulated by metabolites. Posttranslationally
inactivated by cysteine-mediated redox modification via the
inactivated by cysteine-mediated redox modification via the
ferredoxin-thioredoxin system in the light and this avoids futile
cycles with photosynthetic CO2 fixation (By similarity).
-!- PATHWAY: Pentose phosphate pathway; first step.
-!- CBUSULDIAR LOCATION: Chloroplast.
-!- SUBURIANAL STAGE: Increase of activity in the apex linked to
prover the early stages of the transition from vegetative to reproductive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This Swiss-Prot entry is copyright. It is produced through a collaboration between the Swiss Institute of Bloinformatics and the EMED outstation - the Buropean Bioinformatics Institute.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 --- FUNCTION: Acetylates the lysine at residue 12 of free histone H4 but does not modify histone H4 when packaged in chromatin. HATI has intrinsic substrate specificity that modifies lysine in recognition sequence GXGXXG.
--- CATALYTIC ACTIVITY: Acetyl-CoA + histone = CoA + acetylhistone.
--- SUBUNIT: Oligomer (>200 kDa) of HATI and HAT2 subunits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Labaer J.;

Int. J. Biochem. 20:337-345(1988).
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed by the venom gland.
-!- TOXIC DOSE: LD(50) is 9.4 mg/kg by intravenous injection.
-!- TOXIC DOSE: LD(50) is 9.4 mg/kg by intravenous group XIII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
